**Taxon Name:** *Darevskia dryada* (Darevsky & Tuniyev, 1997)

**Synonym(s):**
- *Lacerta dryada*

**Common Name(s):**
- English: Charnali Lizard

**Assessment Information**

**Red List Category & Criteria:** Critically Endangered B2ab(iii,v) ver 3.1

**Year Published:** 2009

**Date Assessed:** December 14, 2008

**Justification:**
Listed as Critically Endangered because its Area of Occupancy is probably less than 10km², all individuals are in a single sub-population, and the extent of its forest habitat has been severely reduced and continues to decline.

**Geographic Range**

**Range Description:**
This species is endemic to the Caucasus region where it is found in northeastern Turkey (near Hopa, Artvin Province) and could extend north into the Pontic area of southwestern Georgia (Adzharia). It ranges between 50 and 700m asl.

**Country Occurrence:**
Native: Georgia; Turkey
Darevskia dryada

Range
- Extant (resident)

Compiled by:
IUCN (International Union for Conservation of Nature)
Population
Populations are severely fragmented and occur in relatively low densities across its limited range.

Current Population Trend: Decreasing

Habitat and Ecology (see Appendix for additional information)
Populations inhabit narrow ravines containing large boulders and rocky outcrops, usually under canopy of subtropical forest with evergreen undergrowth. The species is not adaptable to habitat modification.

Systems: Terrestrial

Threats (see Appendix for additional information)
This species is threatened by general deforestation. Populations are limited to increasingly threatened forest fragments. Ongoing tourism development along the Black Sea coastline is a threat to the species.

Conservation Actions (see Appendix for additional information)
This species has not been recorded from any protected areas. There is a urgent need to maintain existing areas of suitable forest habitat for this species.
